

UrbanShieldMH-Side

UrbanShieldMH-Side is a lightweight drop-in replacement for hard side torso plates. Its construction is identical to NIJ certified UrbanShieldMH torso panels. The strike face is comprised of alternating columns of flat and curved imbricated carbon-fiber wrapped Vercob₄C™ tiles. These curved tiles permit the neutral tile assembly to follow the natural contour of the side torso. It is backed by a soft ballistic fabric which molds to the body. It is pliant with torso contortions and is *comfortable*.

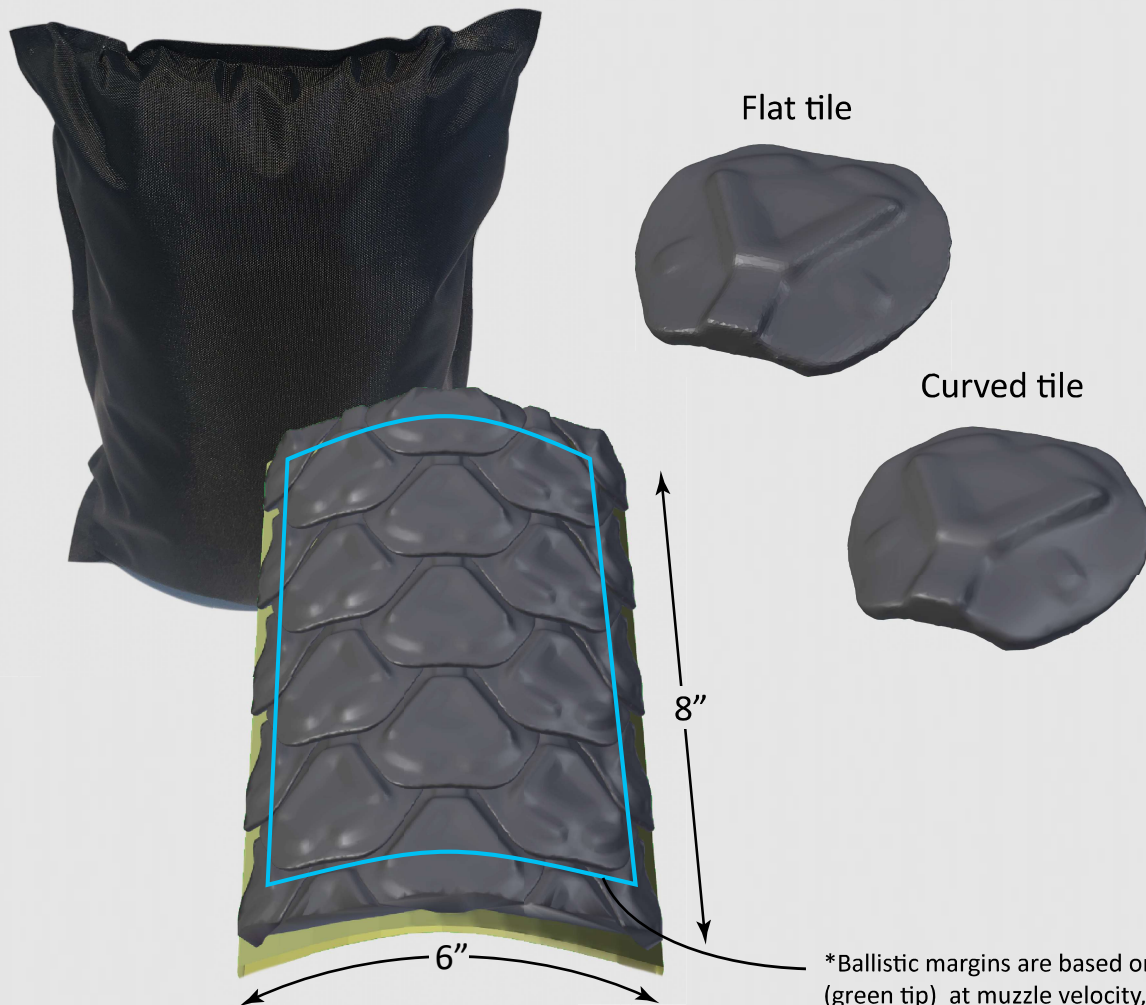

NIJ-certified Level III torso panel in a sleeve with side panels of identical construction, suffering no ballistic windows between them. Configured with shooter's, rectangular, or extended cuts, the composite panel is accommodated in Verco's custom-made carriers.

Size	Weight (lbs)	Ballistic Margin (in)
6" x 8"	2.5	0.50
6" x 6"	1.9	0.50

UrbanShield-UpperArm

Using all Verco B₄C™ curved carbon fiber-wrapped tiles, the panel has a natural position with a high radius of curvature. It wraps snugly around the upper arm. Its construction is identical to NIJ certified UrbanShieldMH torso panels.

Combined with an extended coverage torso panel, the system yields *complete side torso rifle protection*.

Size	Weight (lbs)	Ballistic Margin (in)
6" x 8"	2.5	0.50
6" x 6"	1.9	0.50

*Ballistic margins are based on ballistic tests with the M855 (green tip) at muzzle velocity, NTS-Wichita.
